

Iurii Basov

Target Role: Machine Learning Systems Engineer

Location: United Arab Emirates (remote-ready) | Open for relocation | WhatsApp: +84822510931 | Telegram: @novator_24 | Email: basov.yo@gmail.com | LinkedIn: linkedin.com/in/basovi

Professional Summary

My name is Iurii Basov. I am actively considering Data Architect and Tech Lead opportunities, and I am open to Machine Learning Systems Engineer roles where AI/ML workflows must run reliably at production scale. I have 13 years in IT: I started as a Java/Scala developer, moved into ML and platform engineering, and later led mission-critical data/ML initiatives. I work as a playing coach and full-stack data specialist, combining backend system ownership, model-integration pragmatism, and production operations discipline.

Core Technology Stack (Matched to Vacancy)

- Scalable backend architecture for ML-powered media systems
- High-throughput media ingestion and asynchronous processing pipelines
- Distributed event-driven workflows (SQS/Kafka/PubSub patterns)
- Reliable async patterns: retries, idempotency, DLQ, backpressure
- Metadata extraction, OCR, speech-to-text, scene analysis pipelines
- Multimodal inference integration (text/image/audio/video)
- Embedding generation and semantic retrieval systems
- Vector search tooling: Pinecone, Weaviate, Qdrant, FAISS, pgvector class systems
- Model serving optimization (batching, caching, concurrency, autoscaling)
- Inference optimization (quantization, routing, prompt optimization)
- Production observability: logging, metrics, tracing, alerting, runbooks
- Cloud systems (AWS/GCP/Azure) and infrastructure operations
- Python / Node.js backend engineering
- PyTorch / TensorFlow / HuggingFace ecosystem exposure
- SQL/NoSQL data modeling and schema design
- RESTful APIs and modular architecture design
- Engineering leadership, mentoring, and technical planning

Relevant Experience

- Lead Software Engineer / ML Platform Lead — Sberbank (Apr 2020 - Mar 2025)

- Led architecture and delivery of AI/data platform components with strong requirements on reliability, observability, and scalability.
- Improved production quality of inference and data workflows via robust monitoring, incident patterns, and performance optimization.
- Software Developer / Lead MLOps & Data Engineer — Multi-domain Projects (Apr 2013 - Aug 2025)
 - Built and operated high-throughput backend/data pipelines integrating model outputs into real operational workflows.
 - Shipped measurable improvements in latency, throughput, resilience, and cost-awareness across distributed systems.

Working Style

- End-to-end ownership mindset: design, implementation, deployment, monitoring, iteration.
- Strong reliability-first engineering in non-deterministic AI workflow environments.
- Hands-on mentor who raises architecture, code quality, and execution discipline across teams.

Education

Moscow State University — MS, Calculus Mathematics (2001 - 2006)
