

cover Letter

Dear Hiring Team,

My name is Iurii Basov, and I am interested in the Machine Learning Systems Engineer role at Tether. I bring 13 years of engineering experience across backend systems, data/ML platforms, and production operations in high-impact environments.

My'core hard skills include scalable backend architecture, asynchronous media/ML pipelines, distributed orchestration patterns, multimodal AI workflow integration, vector search/retrieval systems, and observability-driven reliability engineering. I am comfortable optimizing inference and processing workflows for latency, throughput, fault tolerance, and cost in production.

I work as a playing coach: I stay hands-on in implementation while mentoring engineers and guiding architecture decisions. I focus on secure, maintainable, and high-performance systems that can evolve as product complexity grows.

I would be glad to discuss how my background can contribute to your media intelligence platform and applied ML systems roadmap.

Best regards,

Iurii Basov
