

Iurii Basov

Target Role: Senior Data/ML Engineer (AWS)

Location: United Arab Emirates (remote-ready) | Open for relocation | WhatsApp: +84822510931 | Telegram: @novator_24 | Email: basov.yo@gmail.com | LinkedIn: linkedin.com/in/basovi

Professional Summary

My name is Iurii Basov. I am actively considering Data Architect and Tech Lead opportunities, and I am open to Senior Data/ML Engineer roles focused on AWS-native data and AI systems. I have 13 years in IT: I started as a Java/Scala developer, moved into ML and platform engineering, and later led large-scale data/ML initiatives in enterprise environments. I work as a playing coach and full-stack data specialist, combining architecture ownership, production delivery, and business-impact orientation.

Core Technology Stack (Matched to Vacancy)

- AWS multi-zone data lake architecture (S3 raw/curated/analytics layers)
- Batch and real-time pipelines (AWS Glue, Kinesis, Step Functions)
- ETL, transformations, metadata management (Glue Data Catalog)
- Python and SQL for scalable data engineering
- Amazon SageMaker (train, tune, deploy, monitor ML models)
- Amazon Bedrock and enterprise GenAI integrations
- Data governance and security (AWS Lake Formation)
- Data quality controls and enterprise documentation
- Azure-to-AWS migration (schema mapping, validation, reconciliation)
- Feature engineering and ML integration best practices
- Cloud-native distributed data ecosystems
- Cross-functional collaboration (Data/ML/DevOps/Architecture teams)
- Agile delivery with ownership and autonomy

Relevant Experience

- Lead Software Engineer / ML Platform Lead — Sberbank (Apr 2020 - Mar 2025)
 - Led cloud-oriented data and ML platform initiatives covering ingestion, transformation, model delivery, and monitoring.
 - Improved scalability, reliability, and business decision quality through production-grade pipeline and model operations.

- Software Developer / Lead MLOps & Data Engineer — Multi-domain Projects (Apr 2013 - Aug 2025)
 - Built resilient data ecosystems for finance, logistics, and digital products with batch/stream processing patterns.
 - Delivered measurable gains in latency, freshness, governance, and integration quality for enterprise analytics use cases.

Working Style

- Strong end-to-end ownership from architecture and implementation to production operations.
- Focus on secure, governed, and observable data/ML systems.
- Collaborative execution in cross-functional global engineering environments.

Education

Moscow State University — MS, Calculus Mathematics (2001 - 2006)
