

Iurii Basov

Target Role: Backend Engineer, AI Systems

Location: Open for relocation (Singapore) | WhatsApp: +84822510931 | Telegram: @novator_24 | Email: basov.yo@gmail.com | LinkedIn: linkedin.com/in/basovi

Professional Summary

My name is Iurii Basov. I am actively considering Data Architect and Tech Lead opportunities, and I am open to Backend Engineer roles focused on AI systems. I have 13 years in IT: I started as a Java/Scala developer, moved into ML and platform engineering, and later led AI/data platform initiatives in enterprise environments. I work as a playing coach and full-stack data specialist, combining hands-on implementation with architecture ownership, reliability focus, and business outcomes.

Core Technology Stack (Matched to Vacancy)

- Backend engineering for AI-powered production systems
- Inference and orchestration layers for multi-step workflows
- AI request lifecycle: routing, caching, batching, streaming, state management
- Latency/throughput/cost optimization for inference services
- High-throughput low-latency distributed backend systems
- Reliability engineering under non-deterministic model behavior
- Tool-calling, retries, and failure-handling workflows
- Observability: logging, tracing, debugging model outputs/failures
- Production-grade API design for mobile/desktop clients
- Python, Node.js, PyTorch
- OpenAI / Anthropic / open-source LLM integration
- SQL and NoSQL data systems
- Kubernetes and Docker operations
- Collaboration with ML and product teams in high-velocity environments

Relevant Experience

- Lead Software Engineer / ML Platform Lead — Sberbank (Apr 2020 - Mar 2025)
 - Led backend and AI platform initiatives where low-latency decisions, service reliability, and observability were critical.
 - Improved orchestration quality, operational stability, and production debugging workflows for high-impact systems.

- Software Developer / Lead MLOps & Data Engineer — Multi-domain Projects (Apr 2013 - Aug 2025)
 - Built production-grade APIs and data/ML services with multi-source integrations, retries, and resilience patterns.
 - Optimized throughput, latency, and maintainability in complex distributed environments.

Working Style

- Bias toward shipping and learning from production behavior.
- Strong ownership over correctness, reliability, and cost trade-offs.
- Comfortable operating at the boundary between ML capability and user-facing product guarantees.

Education

Moscow State University — MS, Calculus Mathematics (2001 - 2006)
