

Iurii Basov

Target Role: MLOps / ML Engineer (Predictive AI)

Location: Spain (remote/flexible) | Open for relocation to Madrid | WhatsApp: +84822510931 | Telegram: @novator_24 | Email: basov.yo@gmail.com | LinkedIn: linkedin.com/in/basovi

Professional Summary

My name is Iurii Basov. I am actively considering Data Architect and Tech Lead opportunities, and I am also open to MLOps/ML Engineer roles focused on predictive AI in critical business systems. I have 10+ years in IT: I started as a Java/Scala developer, then moved into ML and platform engineering, and later led ML platform initiatives in enterprise environments. I work as a playing coach and full-stack data specialist, combining mathematical rigor, production ML delivery, and business-impact orientation.

Core Technology Stack (Matched to Vacancy)

- Predictive AI/ML models (forecasting, time series)
- Applied statistics and mathematical modeling
- MLOps: production deployment and monitoring of ML models
- Python (advanced)
- Optimization techniques: LP/MILP
- Business-decision models (pricing, optimization, forecast)
- Real-time asset control and decision workflows
- Revenue-impact ML systems in critical environments
- docker
- Kubernetes
- Energy/trading/utilities domain familiarity
- High-stakes production engineering and reliability
- International collaboration in English (high level)

Relevant Experience

- Lead Software Engineer / ML Platform Lead — Sberbank (Apr 2020 - Mar 2025)
 - Led predictive ML and platform initiatives where model outputs directly affected operational and financial decisions.
 - Owned production reliability, performance, and monitoring workflows for data/ML systems in demanding environments.

- Software Developer / Lead MLOps & Data Engineer — Multi-domain Projects (Apr 2013 - Aug 2025)
 - Built and maintained high-load forecasting/data platforms for finance, logistics, and optimization-heavy use cases.
 - Improved latency, model quality, and operational stability through production-grade MLOps practices.

Working Style

- Strong ownership: from model design and validation to deployment and business impact tracking.
- Keep-it-simple approach for complex domains: practical models with measurable value.
- Comfortable in high-pressure, mission-critical technical contexts.

Education

Moscow State University — MS, Calculus Mathematics (2001 - 2006)
