

cover Letter

Dear Hiring Team,

My name is Iurii Basov, and I am interested in the Senior Data/ML Engineer (AWS) role. I bring 13 years of software/data engineering experience with strong focus on cloud-native data platforms and production machine learning delivery.

My'core hard skills include AWS data lake architecture (S3/Glue/Kinesis/Step Functions), Python and SQL pipeline engineering, SageMaker model operationalization, Bedrock-enabled GenAI workflows, data governance via Lake Formation, and Azure-to-AWS migration support. I am comfortable building end-to-end systems that balance scalability, quality, security, and business impact.

I work as a playing coach: I stay hands-on in implementation while helping teams align architecture, delivery, and operational excellence. I thrive in cross-functional environments where data and ML systems directly enable enterprise transformation.

I would be glad to discuss how my background can contribute to your AWS data and AI roadmap.

Best regards,

Iurii Basov
