

cover Letter

Dear Hiring Team,

My name is Iurii Basov, and I am interested in the Backend Engineer, AI Systems role at A1. I bring 13 years of engineering experience across backend architecture, ML platform delivery, and production operations in high-impact environments.

My core hard skills include inference pipeline design, AI request orchestration (routing, retries, caching, batching, streaming), low-latency API engineering, observability-driven operations, and reliability controls for non-deterministic model behavior. I have hands-on experience with Python/Node.js services, SQL/NoSQL systems, and Kubernetes/Docker-based deployment environments.

I work as a playing coach: I stay hands-on in implementation while mentoring teams and raising the bar on stability, performance, and engineering quality. I am motivated by building practical AI systems that deliver real-world value with consistent user experience.

I would be glad to discuss how my background can contribute to A1 AI orchestration and inference platform goals.

Best regards,

Iurii Basov
