

Iurii Basov

Target Roles: Senior Backend Engineer / Tech Lead (Marketplace, Platform, Data-Intensive Products)

Location: Open for relocation (including Cyprus) | WhatsApp: +84822510931 | Telegram: @novator_24 | Email: basov.yo@gmail.com | LinkedIn: linkedin.com/in/basovi

Professional Summary

My name is Iurii Basov. I am actively evaluating opportunities for Data Architect and Tech Lead roles, and I am also open to Senior Backend tracks. I have 10+ years in IT: started as a Java/Scala developer, then moved into ML/platform engineering, and progressed to ML platform leadership in enterprise environments. I work as a playing coach and full-stack data specialist: hands-on with architecture and delivery while mentoring engineers and aligning technical execution with business goals.

Core Technology Stack (Matched to Wheely JD)

- Go (production backend development; strong engineering fundamentals, language-flexible)
- Java, Scala, Python
- Microservices and migration patterns (including legacy monolith decomposition)
- PostgreSQL, MongoDB, Redis
- RabbitMQ, Kafka (message brokers, async/event-driven architecture)
- gRPC, REST APIs, Thrift-style RPC integrations
- AWS, Kubernetes, Terraform
- CI/CD, Continuous Delivery, incident response and reliability engineering
- TDD practices, clean code, domain-driven decomposition (DDD mindset)
- High-load system design, latency/performance optimization
- Cross-functional collaboration with product managers, designers, and data scientists
- Mentoring and technical leadership

Experience

- Lead Software Engineer / ML Platform Lead — Sberbank (Apr 2020 - Mar 2025, Moscow)
 - Led platform initiatives for ML and data-heavy products, owning architecture decisions, delivery quality, and operational reliability.
 - Acted as a playing coach for engineers; improved engineering discipline, production readiness, and cross-team execution.

- Software Developer / Lead MLOps & Data Engineer — Multi-domain Projects (Apr 2013 - Aug 2025)
 - Built cloud and on-prem data platforms for banking, e-commerce, logistics, and ad-tech workloads with streaming and batch pipelines.
 - Designed and operated services using Airflow, PostgreSQL, Spark, S3, Kafka, NiFi, and Hadoop; integrated ML capabilities into business flows.
 - Delivered measurable impact: improved latency, prediction quality, response times, and throughput under growing load.

Leadership & Working Style

- Playing coach: I stay hands-on while mentoring and scaling team effectiveness.
- Strong communicator: I translate abstract requirements into practical technical plans.
- Team-first mindset: I value healthy team atmosphere, trust, and ownership.

Education

Moscow State University — MS, Calculus Mathematics (2001 - 2006)

Notes for Recruiters

Open to office-hybrid models with relocation support. Comfortable with algorithmic interviews, live coding, and system design rounds.
