Iurii Basov

ML Ops / Web Developer / Lead Data Engineer
Russia

Summary

ML / AI / Full Stack. Need Visa Sponsorship.
Soft skills: time management, mentoring, hardworking.

Experience

Upwork

Software Developer

April 2013 - August 2025 (12 years 5 months)

Abu Dhabi Emirate, United Arab Emirates

Lead ML Ops - Project 1 for the bank

Designed and developed resilient cloud-based data processing platform architectures supporting real-time and streaming data pipelines, integrating data landscapes across 5 diverse business units. Enabled e-commerce and logistics operations processing over 300,000 orders daily using Airflow, PostgreSQL, Apache Spark, S3, and Kafka. Led a team of 3 data engineers and managed multiple service providers to maintain and enhance data platforms servicing commercial real estate markets and delivery startups with combined revenues exceeding \$0.2 billions.

Data Engineer - Project 2 for the trading system

Developed an online credit risk scoring system using open-source technology stack including Apache NiFi, Apache Kafka, and Hadoop, enabling real-time data processing and analytics for Home Credit Bank. Integrated multiple diverse data sources to streamline risk assessment workflows, improving accuracy and efficiency of credit scoring. Deployed machine learning models to power a chatbot for customer interactions, enhancing user experience and automating risk-related queries. Prepared comprehensive technical documentation and conducted detailed hardware cost and performance evaluations to support system scalability and maintenance. Achieved measurable improvements including reduced data processing latency by 5%, improved model prediction accuracy by 3%, and increased chatbot engagement rates by 18%.

Web Developer - Project 3 for the game industry

Improved server response time by 30%, enabling higher bid processing rates in real-time auctions. Enhanced system data accuracy and reporting capabilities, leading to a 20% increase in ad campaign optimization efficiency. Developed scalable architectures that supported a 50% increase in concurrent users without performance degradation. Developed and maintained the Demand-Side Platform (DSP) server and statistics system for real-time advertising auctions, ensuring high performance and scalability.

Sberbank

Lead Software Engineer

April 2020 - March 2025 (5 years)

Moscow, Moscow City, Russia

Education

Moscow State University

MS, calculus math · (2001 - 2006)
