

cover Letter

Dear Hiring Team,

My name is Iurii Basov, and I am interested in the Site Reliability Engineer role at Wheely in Nicosia. I bring 10+ years of software and platform engineering experience, including ownership of reliability, infrastructure evolution, and production operations in high-impact environments.

My core hard skills include AWS, Kubernetes, MongoDB, PostgreSQL, RabbitMQ, Redis, Ansible, Terraform, Grafana, Prometheus, Sentry, Loki, Jenkins, GitHub Actions, Linux troubleshooting, and automation with Bash/Python. I have practical experience with incident response, service migration, application pipeline participation, and resilient infrastructure design.

I work as a playing coach: I stay hands-on with technical implementation while helping engineering teams diagnose issues quickly, automate repetitive operations, and improve delivery speed without compromising reliability or security.

I would be glad to discuss how my background can contribute to Wheely infrastructure team and support your reliability and time-to-delivery goals.

Best regards,

Iurii Basov
