

Cover Letter

Dear Hiring Team,

My name is Iurii Basov, and I am actively considering senior quant software and data platform roles. I bring 10+ years of IT experience, from Java/Scala engineering to ML/data platform leadership in enterprise environments.

My core hard skills include Python, PySpark, SQL, data engineering pipelines (ingestion, transformation, modelling, automation, data quality checks), APIs (REST, SOAP, gRPC with authorization/authentication), architecture and design patterns, TDD, CI/CD, DevOps, AWS/Azure, Databricks, Palantir Foundry, and analytical UI development with Dash, JavaScript, and React. I also have practical exposure to quant-oriented workflows including risk, simulation, and portfolio-support analytics.

I work as a playing coach: I remain hands-on in coding while mentoring teams, challenging requirements, and balancing short-term delivery with long-term architecture quality. I am comfortable collaborating across business and technical stakeholders in Agile delivery models.

I would be glad to discuss how my background can contribute to scalable quant and data solutions in your team.

Best regards,

Iurii Basov
